Evaluation and conclusion There were no kind of stability issues in our tests, since the tool did not hang, crash or pop up error messages. It has a good response time and runs on low CPU and RAM, so it does not hamper system performance. Wrapped in a user-friendly interface, Fenix Manager provides users with approachable options and configuration settings for managing Modbus network connections easily. This product was given to us for review.The present invention relates to communication systems in general and, more particularly, to a method and system for generating and distributing an emergency alert. A typical emergency alert system is used to notify the general public of an emergency situation. In a mass-broadcast communication system (e.g., a television system), such as a television network system, the emergency alert system may generate an emergency alert in the form of an emergency message which may be communicated to all television viewers or an emergency message which may be communicated to only a particular television viewer or viewers. The emergency alert system generates the emergency alert message based on a predetermined criteria or condition. For
