Perhaps 1 that stands out most from Adobe Photoshop is the story it can capture and tell. The world of digital photography has put more effort into capturing information. There's a reason why most of the cameras on the market can tell a story. You can also manipulate it too. Traditionally, the photographer could physically use a light or dark room to create a final image. Early cameras relied on them, and it took photos of some impressive quality as a result. Photographers combined tones of black for a dark image, and white for a light image. Some photographers, even in the beginning, used the gray slider to create a balance between both. It was a way to blend tones and keep the colors more defined while still maintaining the original message. In the coming years, photographers have used raw processing in conjunction with Photoshop and a computer programing algorithm that can tell a story. While Adobe hasn't yet implemented it, it has developed a system that can capture tone, exposure, and color. That's where the automation comes into play. An automated Nikon would quickly shoot thousands of pictures, and once the images are put into a gallery or album, it will use an algorithm to automatically create a stylized image that reflects the subject's personality and tone. It may even blur out the person to allow for a more romantic shot. All of these are a part of the algorithm; you may or may not know it. And that's where Adobe Sensei comes in. It's one of the newest offerings and more significantly, a type of artificial intelligence that is constantly learning.

It's not that it's just learning from what it's processed to become better; it learns a lot more.

Photoshop has always been a powerful and versatile tool for photographers, graphic designers and illustrators. Now, there are fun and new ways to use Photoshop to create text, shape layers, and even create popular animation techniques.

Deke McClelland, the creator of Photoshop, is now Adobe's Head of Creative Cloud software for all desktop products. McClelland leaves Adobe after five years of work. In his goodbye message, he said his "creative mission" is to make Adobe software "a vehicle for expressing digital creativity, to fuel and enable artists, designers, and creators to unleash their full potential and create the most amazing work." Adobe has unveiled update to Photoshop CC. The new release is being touted as the most powerful update to the photo editing software in the company's history, with up to 100% improvement on workflow speed, editing accuracy, and flexibility, as well as new features, improvements for the email and social media. One of the new features will be a new Look development team in the company, creating features that blend the traditional looks of the brand with modern styles and visuals to create new ways of looking at the world. Photoshop features PixelSense technology for precise control over individual pixels, letting you edit individual pixels and use Direct Selection to adjust the overall intensity and color of an image (green eating white line effect). The compatibility of the software is being expanded in 2020 for iOS, Android, Mac, and Windows. The new update will include full support for iPhone 11, iPhone 11 Pro, and iPhone 11 Pro Max, with up to 90% display performance improvement for large images, and seamless image import for devices with limited internal storage space. Support for next-generation Pixel phones, such as the Google Pixel 4, will be rolled out later this year.

"We are excited about the new features in Photoshop and the new ways people will be able to create and share their work more efficiently," said John Knoll, senior vice president and chief creative officer at Adobe. "Whether users are working with a mobile phone in a cafe or at home, a laptop in an airport, or a desktop computer onsite, they will have access to the power and performance of our Photoshop technologies to add value to their work, their phone and their photo library." "Photoshop holds a place in the creative workflow that works for every type of user, on every kind of device. That notion was at the core of our design," said Lisa Paul, general manager of Photoshop. "We continue our journey of bringing career-making tools into the hands of the people who use them most, giving them the chance to make amazing photos and designs on their own." Users can preview for review using Share for Review, a new feature in Photoshop that enables them to instantly share photos opened in the app to a file that can be edited in Photoshop. When that person returns, all their changes can be seen in real-time-in addition to their comments and annotations. A new one-click Fill and Delete tool makes it a breeze to remove objects from a photo, replacing them with much more realistic or custom elements. An even smarter one-click tool for clone removal is now available, allowing users more control to remove unwanted objects with the precision of a real artist.
