When I'm using Elements, I'm taking advantage of effects, editing, too many layers, or any combination of those, that I couldn't have mastered in Photoshop. I'm also using Zones to tightly control image editing instead of toying with layers. Elements was created to be simple and it does that. We've had the opportunity to review similar programs to Photoshop Elements, and we've always been impressed by their tools and ease of use. Elements is no exception. The interface is a bit more straightforward than most, and that makes it easier for newcomers. For that reason, it suits me better because I'm more familiar with the interface and how to use it. However, we're both fans of Lightroom, Creative Cloud's (CC) main product, which is a huge time-saver for serious photographers. The basic flow of the programs is the same, but Lightroom felt more natural to me, since we became photo editors. The interface of Elements is straightforward and uncomplicated. That's a main reason it's so easy to use and establish an unsurpassed workflow in it. My favorite feature of the program are the automatically organized, smart, and well-built collections of images. Adobe Photoshop is one of the best photo-editing software and the best photo resizing application. It has a number of advanced tools that make it easy to resize and transform your photos into any shape and size. I have used Photoshop for a number of years and love it. It has been a workhorse in my group at my company. I did need to purchase this one as my copy of the professional version is at capacity with little room to grow. The ability to handle files large in size is great and has been the most valuable tool in my graphic design skill set.

Since it's based on color data—really quite literally—most adjustments don't require making changes to your image other than slight color shifts. This makes Curves perfect for corrections. **What software is best for graphic design for beginners?**
