Depending on the quality of the image or the size of the objects in it, a viewer uses a limited amount of the visual information. To make sure the viewer perceives all the details he must analyze the object against a background and then the edges of the objects against its surroundings. If he can't distinguish edges then the viewer becomes annoyed and may stop looking. In visual design, we use the terms **edge**, **line** and **seam** to make sure the viewer perceives the object. When we talk about an edge, we mean its borders. Both borders have different features that influence how we perceive them: semi-transparent for the **seam**, with isolated colors for **line** and the image feature (think about **edge**) for the **line**. The edge effect is the terms considered: Cassegrain Edge Effect. Well. Many good things to say about Photoshop. It is the best image editing application in the world today. You can manipulate the photos to make it look one way and the other. With Photoshop you can make the photo look good with really cool results. I've been using Photoshop since version 1 & I'm still using it today! During these 15 years I've tried many free and paid programs, but when it comes to photo-editing, the road ends at Photoshop! I'm firm believer that I don't necessarily need to have the best software, just so long as I can create what I've imagined. Photoshop is the most powerful program, but very easy to use. You can accomplish a lot with Photoshop, even if you're a newbie. Photoshop is still my number one choice for photo-editing, and I look forward to what the future holds for the program. Have a nice day,
Adam

The new artboards appear in the app's task pane. As an alternative to the app's panel, you can use the Pathfinder panel to quickly access the most important functions from one central location.

Possibly the most exciting feature for design professionals is a "make-anything" feature that allows for non-photographers to compose and edit photos with the same level of precision as professionals, with no photos editing skills required. This will let designers make their own photo edits by creating a template, using a library of presets, overlaying text and images, and applying creative filters to a photo. The latest version of Photoshop also introduces a new iPad-optimized size called HiDPI for working on computers with higher resolution monitors. At 72 pixels per inch, the iPad size is defined in the same way the original iPad is, so it's ideal for drawing and other multi-monitor editing work. However, because the iPad screen is so close to the user's face, Adobe is changing the way the tool

handles eye tracking. The new eye-gaze feature will determine where in an image you're looking and direct you to the best bits of an artwork (not just the high-quality sections, but the sections that you haven't yet made your eyes go to) with a new eye-tracker feature called Frequent Items. To make non-photographers edit their photos, Adobe also added a make-anything tool called Photography Project Creator. It lets anyone transform their photo into something artistic or creative, with no editing skills required. Just select the type you want to add to the photo, start "painting", and your photo can become a cartoon, or anything else you can imagine. When it's ready, you can print or export the final work.
