Elements and Photoshop also offer new tools built with the same innovative features. New additions include the ability to adjust the contrast and brightness of a selection without changing the shape or color of objects in the image. The fill and fill as clipping mask tools now delete just the edge of an image, ensuring that users don't accidentally destroy an image or leave holes in it. A new Delete and Fill tool on Photoshop's own toolbar enables users to perform those actions in just one step; that eliminates the need to create a new layer, and the time-consuming process of using the regular tool to select an area, delete it, then replace it with black. Elements and Photoshop also support user comments on and feedback about image content, to help improve future versions of the software. Comments on shared images can be seen by all users and editors; read and reply comments can be sent to other editors or to an Adobe representative. Reactions to images on edges of images, known as "ranges", are available in Elements and Photoshop. They're used by artists to match color and tone, and by photographers to show other editors how an image will look in print, on screen, or in a canvas print, including under different lighting and the manufacturer's specified paper arts. When not used in a print-ready format, an image's reaction can be displayed on a preview screen, so everyone can see the look of the image before it's been printed. Other features address the increasingly complex editing task of catching subtle color shifts and other problems in long-exposure photographs. Adobe's Retouch photo and video tool in Photoshop Premium is enhanced to offer quick fixes to problems with skin and make-up, teeth whitening, skin lighting, face wrinkles, eye wrinkles, and more. New non-destructive filters are available to address these problems without damaging the original file. Even better, the app now features new Retouch filters, including Sparkle Vivid and Soft Light Smooth.
